

# SUNBELT AIR MONITORING SYSTEM

Exclusively available from Sunbelt Rentals, the Sunbelt Air Monitoring System (SAMS) offers a wireless solution for monitoring job site conditions. Originally designed to meet stringent military specifications for tank lining, SAMS successfully monitors conditions of nearly any critical dehumidification project and is the only logging system able to continuously collect conditions in the event of a loss of power or internet connection. In addition to offering this cutting-edge technology, Sunbelt Rentals also provides unmatched 24/7 emergency service and highly trained specialists with the knowledge and experience to respond quickly to all your needs.

## SUNBELT AIR MONITORING SYSTEM WITH:

- Wireless sensor in protective container
- Data-logging wireless sensor
- Gateway
- Antenna to sensors

- Eliminates the need for troublesome wired sensors with reliable wireless gateway to the internet for data transmission.
- Offers the ability to add unlimited data sensors to system.
- Provides real-time data on job site conditions such as surface temperature, relative humidity, dew point temperature, and more!
- Shows job site data that's easily viewed on any internet-accessible device.
- Sends alarms via email or text to notify personnel of unsafe or worrisome site conditions.
- Is perfect for use on industrial coating and painting projects and construction sites.
- Provides invaluable project documentation of job site conditions.
- Includes option to add sensors that measure air pressure differential and CO2 gases.

## SENSORS WITH HIGH-GAIN ANTENNA
